Comparative Analysis of Critical Terms: Assignment Guide

Formatting Instructions

1. **Apply Styles:**
    a. Use “Heading 1” for main headings.
    b. Use “Heading 3” for sub-headings.
    c. You may choose different styles, but apply them consistently.
2. **Create a Cover Page**: Include the report title, your name, instructors name, and class information.
3. **Page Numbering:** Begin page numbers on the second page.
4. **Scoring note**: Part of your grade will be based on formatting and organization.
5. **Source Attribution**:
    a. A full APA-style reference page is not required, but you must **credit your sources clearly.**
        i. Mention the textbook by name or refer to it as “the textbook.”
        ii. When quoting generative AI, include the **prompt** you used and the **date** the definition was generated.

Research and Pre-Analysis

6. Choose Key Terms:
    a. Open the **Critical Terms** (word bank) document for the appropriate chapters (in the Read section of each Module)
    b. Choose two terms or phrases from **each chapter**.
7. Gather Definitions
    a. **From the textbook**. Copy the definition, exactly as written, into your analysis document.
    b. **Using generative AI,** for each term, submit two prompts
        i. A basic prompt: “Define [term].” This prompt will contain no additional context.
        ii. A role based prompt: ask your generative AI to take on the role of a business manager and define the terms again.
            1. Include additional prompt techniques you included, like limiting the length of the output.
    c. Include your **actual prompts** in the document near the generated definitions.
    d. **Advanced Role-Based Prompt:** Ask the AI to take on the role of a business manager. **Requirement Upgrade:** You must integrate at least one specific technique from this week’s Prompt Engineering video (e.g., Few-Shot Prompting, Chain-of-Thought, or Delimiters) into this prompt.
8. Paste all prompts and definitions
    a. Copy all the prompts you created into your Comparative Analysis Report.
    b. Copy all definitions (textbook and both generative AI responses) into your Comparative Analysis Report.

9. As you collect definitions from the textbook and generative AI, reflect on each term:
    - What differences do you notice? (tone, depth, focus)
    - Which version do you understand better and why?

Structuring Your Comparative Analysis

10. Introductory Paragraph
    a. Purpose: Explain the goal of the Comparative Analysis.
    b. Objectives: Use a brief paragraph or bullet list and state what you will compare or evaluate.
11. Content Paragraphs
    a. For Each Term:
        i. Compare the textbook definition to the **two** generative AI definitions.
        ii. Highlight any key differences in tone, focus, or usefulness.
        iii. Indicate which of the generative AI definitions you found most useful. Why or why not?
12. Concluding Paragraph
    a. Summarize your insights.
    b. Did you accomplish what you set out to do in this assignment? How could you improve your prompts? Would specifying a more narrow audience or giving clearer context have helped generative AI respond more meaningfully?
    c. Briefly discuss any surprising or useful takeaways from comparing human-written and AI-generated content.
    d. Indicate which AI definition was most useful and why. Mention if the specific technique from the prompt engineering video improved the result.

Length and Submission Guidelines

13. The entire document should be **no longer than six pages**, including:
    a. Cover page (1 page)
    b. Main content (up to 4 pages)
    c. Cite the source once with a short in-text reference (e.g., ‘according to the textbook’ or ‘ChatGPT definition as of May 2025’). A full APA-style reference page is not required.
14. Submit your document as a Word or PDF file.
