Excel Project 2: Apartment Furnishing Budget Analysis

PROJECT SCOPE

This project builds on skills covered in chapters 1-6, from the OER Excel e-book. Your goal is to create a financial plan for furnishing your new apartment, ensuring the total cost stays within your budget of $5,000.

BACKGROUND

You have just moved into a new apartment. Your kitchen includes essentials like a stove, oven, refrigerator, and a laundry room. To furnish your kitchen/dining area, living room, and bedroom, you'll need to research and select items within your budget, using online ecommerce sites of your choosing. You have a total budget of $5,000 dollars.

PROJECT REQUIREMENTS

Workbook Overview

Your workbook should contain:

- **Individual Room Sheets,** an individual tab for each room's furnishing details.
- **Budget Summary Sheet** summarizing total expenses, remaining budget, monthly payment calculation, and a spending analysis.

Worksheet Details

ROOM SHEETS: KITCHEN/DINING, LIVING ROOM, BEDROOM

For each room, create a detailed table of furnishings, with at least 10 items. Be sure to organize your tables for readability and include a summary of the costs.

Required Fields for Each Item:

- **Item Name** – Product name or description.
- **Description** – Brief item details.
- **Website** – Source website (use only the main domain, e.g., www.target.com).
- **Quantity** – Number of units (e.g., 1 dining table, 4 chairs).
- **Unit Cost** – Price per item.
- **Total Cost** – Calculated cost for each item (Quantity x Unit Cost).
- **Table Sorting** – Sort each table alphabetically by Item Name.

Total Row Requirements:

- **Total Number of Items** – Sum of all quantities.
- **Total Cost of Room** – Sum of all item costs for each room.

BUDGET SUMMARY SHEET

The summary sheet will consolidate your spending across all rooms and provide an analysis of your remaining budget and monthly loan payment.

Required Calculations:

- **Total Spent per Room** – Use a 3-D formula to calculate total spending in each room (refer to Chapter 6).
- **Grand Total for All Rooms** – Sum of total costs from all rooms.
- **Remaining Budget** – Amount left after total spending from the initial $5,000.
- **Overspending Check** – An IF statement indicating whether you have exceeded the budget.

Loan Repayment Calculation

You are borrowing the full $5,000 at a 3% annual interest rate, to be paid over 5 years. Calculate your monthly payment using the PMT function:

- **Monthly Payment** – Remember to convert the annual interest rate and loan period to a monthly basis.

SPENDING VISUALIZATION

Create a pie chart illustrating the distribution of spending across each room.

- **Pie Chart Requirements:** Title, legend, and data labels for clarity.

FORMATTING AND PRESENTATION GUIDELINES

- **Readability** – Format all sheets for ease of reading, using consistent fonts, styles, and alignments.
- **Appropriate Titles** – Use clear, descriptive headings in each worksheet.
- **Currency Formatting** – Display all dollar amounts to two decimal places.
- **Worksheet Naming** – Assign relevant names to each worksheet tab.
- **Cell Referencing** – Use cell references and Excel functions for all calculations.
